Education

Wilfrid Laurier University

Bachelor of Science in Computer Science

Waterloo, Ontario

Expected Graduation: May 2027

Technical Skills

Languages: Python, Java, JavaScript, TypeScript, C, Go, HTML5, CSS3, SQL, VBA, Swift

Frameworks/Deployment: React, Node.js, Express.js, MongoDB, Git, GitHub, Vercel, Railway, Firebase, Supabase

Cloud/DevOps: AWS, Azure, Docker, Kubernetes, CI/CD, Snowflake, Terraform, Apache Kafka, Databricks

Experience

Software Engineer Intern

Jan 2026 – Present

Wealth Capital Connections

Ottawa, Ontario

- Engineered a real-time data scraping pipeline using **Python** and **REST APIs** to aggregate engagement metrics from high-traction web pages, resulting in a **new industry-standard dashboard** that saves the team **2 hours per week**
- Automated trend analysis by processing scraped data using **pandas** and **SQL** to identify recurring design patterns, resulting in a **20% improvement in front-end iteration speed**
- Developed a live-updating data visualization tool using **React** and **Firebase** to surface web trends in real time, resulting in a **5% increase in user retention** through data-driven design shifts

Software Analyst

Mar 2025 – Dec 2025

Avis Car Rental

Toronto, Ontario

- Extended internal command-line tooling using **Bash** scripting and **Python** to optimize fleet inventory operations, resulting in a **2.5% reduction in system latency** across multi-location infrastructure
- Optimized fleet logistics between headquarters and regional branches using **SQL** and **data transformation** pipelines, resulting in a **5% reduction in vehicle idle time**
- Digitized vehicle tracking records using **structured data automation scripts**, resulting in a **15% improvement in data accuracy** and an accelerated rental check-in workflow

Software Engineer Intern

Apr 2024 – Sep 2024

Habitat For Humanity

Milton, Ontario

- Developed front-end features using **HTML**, **CSS**, and **JavaScript** to redesign the navigation structure, resulting in a **3% increase in website engagement**
- Implemented a version-controlled document management system using **Git** and **GitHub**, resulting in **eliminated document inconsistencies** and **1.5 hours saved** of administrative labor per week

Projects

CartSniper | Full Stack Gen AI Web App | HackCanada 2026

TypeScript, React, Node.js, Firebase, Gemini

- Engineered a multimodal grocery recognition system using **Gemini Vision AI** and **barcode scanning** to compare prices across **10+ Canadian retailers**, resulting in comparisons delivered in **under 1 second**
- Architected a **Firebase-backed ingestion pipeline** processing live flyer data for **1,000+ items**, resulting in an average **23% cost reduction** surfaced per cart

Tab Organizer | Client-side Browser Extension | Featured by Google | 600+ Installs

JavaScript, Chrome APIs

- Built a custom tab classification algorithm using **Chrome APIs** to auto-group **100+ tabs with 95%+ accuracy**, resulting in a **production-deployed extension** featured by Google with **600+ installs**
- Implemented session persistence and crash recovery using **chrome.storage API**, resulting in support for **50+ saved browsing sessions** across active users

HTTP/1.1 Server & Private Cloud | Systems Project

Go, HTTP, TCP/IP, Linux

- Architected an **HTTP/1.1 server from scratch** using **Go's net package**, implementing **request parsing**, **routing**, and **concurrent connections**, resulting in a **fully functional server with no external frameworks**
- Deployed a self-hosted private cloud using **streaming file I/O on Linux**, resulting in **multi-gigabyte transfers at constant memory overhead** and **eliminated reliance on third-party storage**

LLM From Scratch | AI & Deep Learning

Python, PyTorch, TensorFlow

- Built a **Large Language Model from scratch** using **PyTorch** and **TensorFlow**, implementing **transformer architecture**, **tokenization**, and **training pipelines**, resulting in a **fully functional generative model** trained on custom datasets
